

BLOW-IN-BLANKET®

premium insulation systems

July 20, 2009

To Whom It May Concern:

The Blow-In-Blanket System (BIBS) is North America's premier, custom-fitting wall insulation system. BIBS is installed by a network of over 500 contractors, and supported by three of the world's largest insulation manufacturers, Johns-Manville, Knauf and Certainteed..

BIBS must be installed by authorized insulation contractors with special training and installation techniques. BIBS must also use approved insulation materials which are backed by thorough testing and quality control. The Federal Trade Commission has stated that "we view users of this system as manufacturers" ..., because the finished product is produced on the job-site and must comply with the FTC Rule 460, "Labeling and Advertising of Home Insulation". The manufacturers of the materials used in BIBS also back the system, *when installed properly by authorized BIBS dealers.*

BIBS dealers can offer the homebuilder and homeowner the assurance of receiving full insulation protection in their buildings. Unauthorized contractors are not offering the genuine, tested BIBS system and, if they offer an imitation system with untested components and methods, there is no assurance that the expected quality and performance will be delivered. Installation by unauthorized contractors puts the insulator and the homebuilder at potential legal risk.

In Penobscot County, Maine and the greater Bangor area, our only trained and authorized contractor is:

GARSDALE INSULATION, INC.
42 SWETTS POND ROAD
ORRINGTON, MAINE 04474
(207) 825-3161

Please contact Bob Garside or myself for information on how you can use BIBS in your next project.

Sincerely,

Dan Stoner
BIBS Brand Manager
